# Pharmacologic treatment of pain in Italy

Landi et al. 2001;161:2721-4

- As age increased a lower proportion of patients in pain received analgesic drugs.
- Only 1% of patients  $\geq$  85 years received morphine or other strong opioids
- Patients 85 or older were less likely to receive analgesics (OR 0.73, 0.60-0.89)
